UNIT 5- LATTICES AND BOOLEAN ALGEBRA

Properties of lattices

Duality in lattice :

When " \leq " is a partial order relation on a set S, then its converse " \geq " is also partial order relation on S.

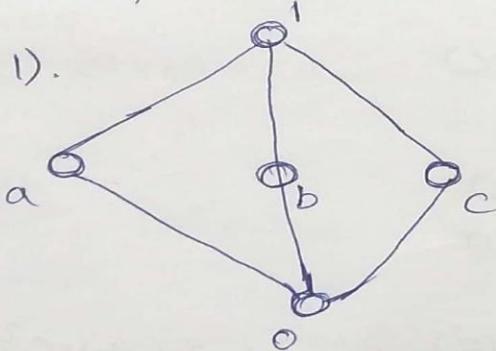

Distributive lattice :

A lattice (L, \wedge, \vee) is said to be distributive lattice if \wedge and \vee satisfies the following conditions, $\forall a, b, c \in L$.

$$D_1 : a \vee (b \wedge c) = (a \vee b) \wedge (a \vee c)$$

$$D_2 : a \wedge (b \vee c) = (a \wedge b) \vee (a \wedge c)$$

Example :

$$L = \{0, a, b, c, 1\}$$

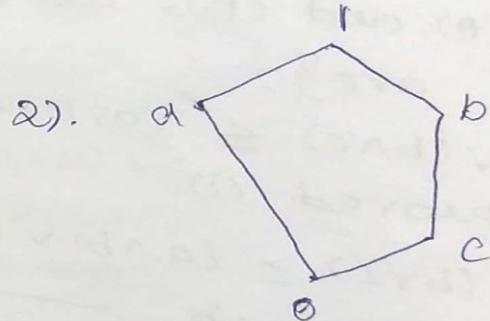

Here

$$a \vee (b \wedge c) = a \vee 0 = a$$

$$(a \vee b) \wedge (a \vee c) = 1 \wedge 1 = 1$$

Since $a \neq 1$

It is NOT a distributive lattice

$$L = \{0, a, b, c, 1\}$$

Here

$$\begin{aligned} c \wedge (a \vee b) &= c \wedge 1 \\ &= a \end{aligned}$$

$$\begin{aligned} (c \wedge a) \vee (c \wedge b) &= 0 \vee c \\ &= c \end{aligned}$$

$c \wedge (a \vee b) \neq (c \wedge a) \vee (c \wedge b)$
NOT a distributive lattice.

UNIT 5- LATTICES AND BOOLEAN ALGEBRA

Properties of lattices

Theorem 3:

Prove that any chain is a distributive lattice.

Proof:

Let (L, \wedge, \vee) be a given chain and A B E L. Since any 2 els. of a chain are comparable, we've either $a \leq b$ or $b \leq a$.

case 1: $a \leq b$

$$\text{then } \text{GLB}\{a, b\} = a \\ \text{LUB}\{a, b\} = b$$

case 2: $b \leq a$

$$\text{then } \text{GLB}\{a, b\} = b \\ \text{LUB}\{a, b\} = a$$

In both cases, any 2 els. of a chain has both GLB and LUB.

\therefore Any chain is a lattice.

Next we prove (L, \wedge, \vee) satisfies distributive property.

Let $a, b, c \in L$.

Since any chain satisfies comparable property, we've the following 6 cases.

case 1: $a \leq b \leq c$

2: $a \leq c \leq b$

3: $b \leq a \leq c$

4: $b \leq c \leq a$

5: $c \leq a \leq b$

6: $c \leq b \leq a$

case 1: $a \leq b \leq c$

$$\text{prove } D_1: a \vee (b \wedge c) = (a \vee b) \wedge (a \vee c)$$

LHS

$$a \vee (b \wedge c)$$

$$\Rightarrow a \vee b \quad (\because b \leq c)$$

$$\Rightarrow b \quad (\because a \leq b)$$

RHS

$$(a \vee b) \wedge (a \vee c)$$

$$\Rightarrow b \wedge c$$

$$\Rightarrow b$$

$$\text{LHS} = \text{RHS}$$

UNIT 5- LATTICES AND BOOLEAN ALGEBRA

Properties of lattices

\therefore D₁ condition is true for the case 1.
Similarly, we can easily prove D_i-Property to the remaining 5 cases.

$\therefore (L, \wedge, \vee)$ is a distributive lattice.

\therefore Any chain is a distributive lattice.

Theorem : \Rightarrow Modular Inequality

~~Let~~ If (L, \wedge, \vee) is a lattice, then for any $a, b, c \in L$, $a \leq c \Leftrightarrow a \vee (b \wedge c) \leq (a \vee b) \wedge c$

Proof :

Assume $a \leq c \rightarrow (1)$

$\therefore a \vee c = c$

By distributive inequality,

$$a \vee (b \wedge c) \leq (a \vee b) \wedge (a \vee c)$$

$$\Rightarrow a \vee (b \wedge c) \leq (a \vee b) \wedge c \quad (\text{using (1)})$$

$$a \leq c \Rightarrow a \vee (b \wedge c) \leq (a \vee b) \wedge c \rightarrow (2)$$

Now conversely, assume

$$a \vee (b \wedge c) \leq (a \vee b) \wedge c$$

Now, by the defn. of LUB and GLB, we've

$$a \leq a \vee (b \wedge c) \leq (a \vee b) \wedge c \leq c$$

$$\Rightarrow a \leq c$$

$$\therefore a \vee (b \wedge c) \leq (a \vee b) \wedge c \Rightarrow a \leq c \rightarrow (3)$$

From (2) and (3), we've

$$a \leq c \Leftrightarrow a \vee (b \wedge c) \leq (a \vee b) \wedge c$$

UNIT 5- LATTICES AND BOOLEAN ALGEBRA

Properties of lattices

Problem

Q. In any distributive lattice (L, \wedge, \vee) , $\forall a, b, c \in L$.
prove that $a \vee b = a \vee c$, $a \wedge b = a \wedge c \Rightarrow b = c$

Soln:

$$\begin{aligned} b &= b \vee (b \wedge a) && (\text{Absorption law}) \\ &= b \vee (a \wedge b) \\ &= b \vee (a \wedge c) && \text{Given condition} \\ &= (b \vee a) \wedge (b \vee c) \\ &= (a \vee b) \wedge (b \vee c) \\ &= (a \vee c) \wedge (b \vee c) && \text{Given condition} \\ &= (a \wedge b) \vee c \\ &= (a \wedge b) \vee c && \text{Given condition} \\ &= a \wedge (c \wedge a) \vee c \\ b &= c && \text{Absorption law} \end{aligned}$$
