

SNS COLLEGE OF TECHNOLOGY An Autonomous Institution Coimbatore-35

Accredited by NBA – AICTE and Accredited by NAAC – UGC with 'A++'Grade Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai

DEPARTMENT OF ELECTRONICS & COMMUNICATION ENGINEERING 19ITT204 - MICROCONTROLLER AND EMBEDDED SYSTEMS

III YEAR / V SEMESTER

UNIT II PERIPHERAL INTERFACING

Interfacing Requirements - Memory Mapped I/O- I/O Mapped I/O TOPIC _

OUTLINE

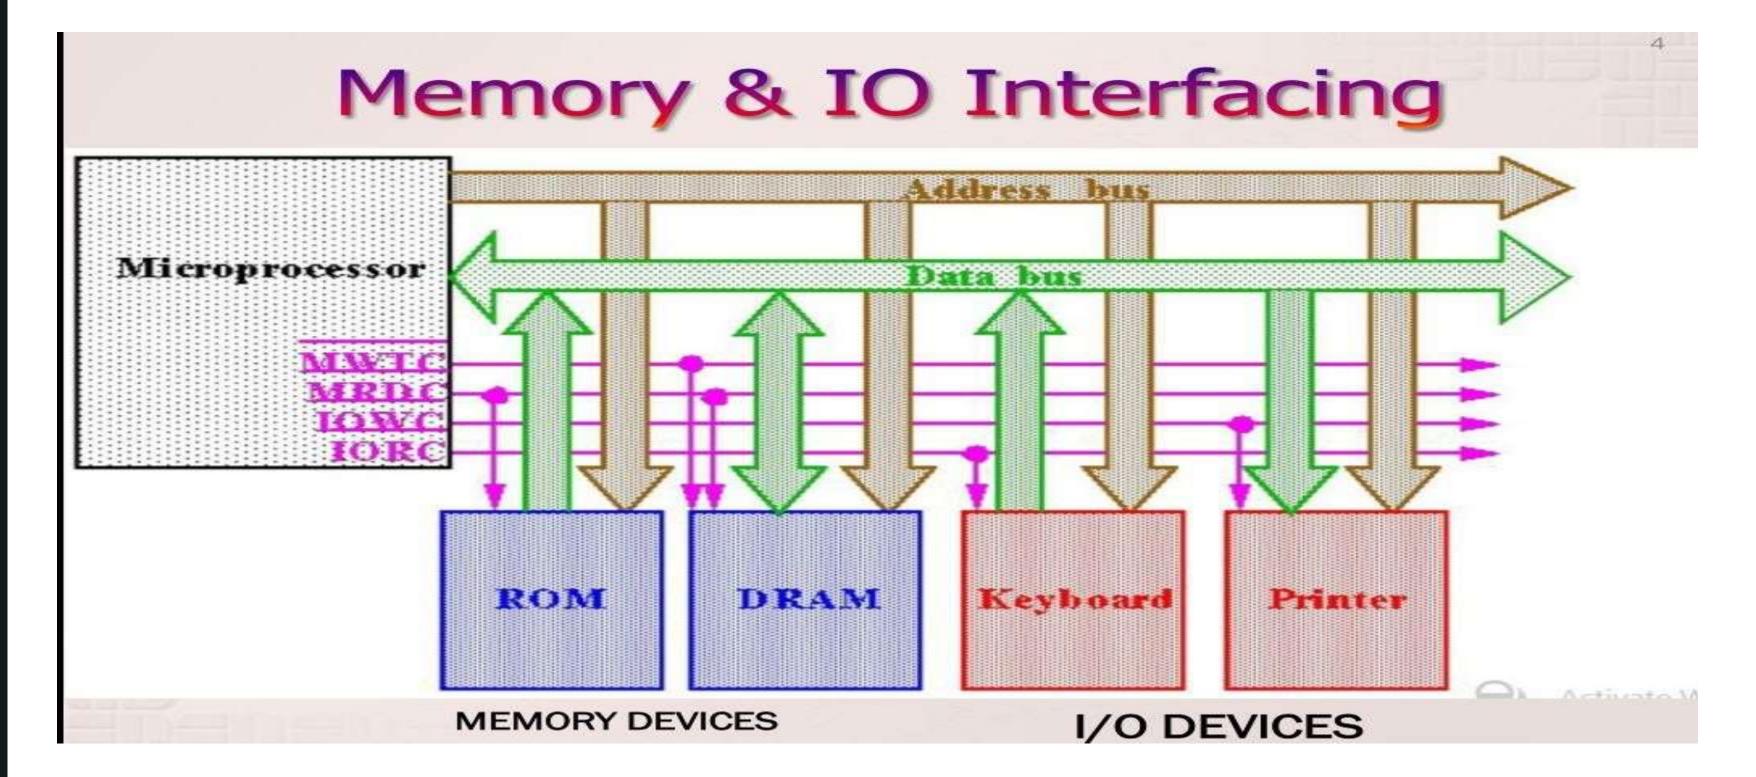

Data Transfers

- Synchronous ----- Usually occur when peripherals are located within the same computer as the CPU. Close proximity allows all state bits change at same time on a common clock.
- Asynchronous ----- Do not require that the source and destination use the same system clock.

interface memory (RAM, ROM, EPROM'...) or I/O devices to 8086 microprocessor. Several memory chips or I/O devices can connected to a microprocessor. An address decoding circuit is used to select the required I/O device or a memory chip.

IO mapped IO V/s Memory Mapped IO

M	emory Mapped IO	ю	Марр
	IO is treated as memory.		IO is
	16-bit addressing.		8- bit

- oed IO
- treated IO.
- t addressing.
- Decoder
- ware.
- address $2^8 = 256$ tions.
- le memory address e is available.

Memory Mapped IO IO Mapped IO

- Memory Instructions are Special Instructions are used like IN, OUT. used.
- Memory control signals Special control signals are used. are used.
- Arithmetic and logic Arithmetic and logic operations can be operations can not be performed on data. performed on data.
- Data transfer b/w register Data transfer b/w accumulator and IO. and IO.

THANK YOU
