## DEPARTMENT OF MATHEMATICS

Problems:

Q. Show that the set  $G = \{1, -1, i, -i\}$  consisting of the 4th roots of unity is a commutative group under multiplication.

Soln.:

Multiplication (Cayley) Table

*	1	-1	i	-i
1	1	-1	i	-i
-1	-1	1	-i	i
i	i	-i	-1	1
-i	-i	i	1	-1

i). closure: Now  $1, -1 \in G$ ,  $+1 * -1 = -1 \in G$   
 $\therefore G$  is closed.

ii). Associative:  $1, -1, i \in G$   $(1 * -1) * i = -i \in G$   
 $1 * (-1 * i) = -i \in G$   
 $\therefore (1 * -1) * i = 1 * (-1 * i)$   
 It satisfies the associativity.

iii). Identity elt.: For  $1, -1, i, -i \in G$   
 $1 * 1 = 1, -1 * 1 = -1, i * 1 = i, -i * 1 = -i$   
 $\therefore 1$  is the identity elt.

iv). Inverse elt.:  
 Inverse of  $-1$  is  $-1$  i.e.,  $-1 * -1 = 1 \in G$   
 Inverse of  $i$  is  $-i$  i.e.,  $i * -i = 1 \in G$

## DEPARTMENT OF MATHEMATICS

Inverse of  $i$  is  $-i$  i.e.,  $i * -i = 1 \in G$   
 Inverse of  $-i$  is  $i$  i.e.,  $-i * i = 1 \in G$

v). Commutative:  $i, -i \in G$   $i * -i = 1 \in G$   
 $-i * i = 1 \in G$

$\Rightarrow i * -i = -i * i$

$\therefore G$  is commutative group under multiplication.

2] Prove that the set  $A = \{1, \omega, \omega^2\}$  is an Abelian group of order 3 under usual multiplication where  $1, \omega, \omega^2$  are cube roots of unity and  $\omega^3 = 1$

Soln.  
 composition table

*	1	$\omega$	$\omega^2$
1	1	$\omega$	$\omega^2$
$\omega$	$\omega$	$\omega^2$	1
$\omega^2$	$\omega^2$	1	$\omega$

i). Closure:  
 All the elements in the above table are the elements of  $A$ . Hence  $A$  is closed under multiplication.

ii). Associative:  
 $(1 * \omega) * \omega^2 = \omega^2 = 1 \in A$   
 $1 * (\omega * \omega^2) = \omega^2 = 1 \in A$   
 It satisfies the associative property.

$(1 * \omega) * \omega^2 = 1 * (\omega * \omega^2)$

iii). Identity element:  $1, \omega, \omega^2 \in A$   
 $1 * 1 = 1, 1 * \omega = \omega, \omega^2 * 1 = \omega^2$   
 $1$  is the identity element of  $A$

iv). Inverse element:  
 Inverse of  $1$  is  $1$  i.e.,  $1 * 1 = 1 \in A$   
 $\omega$  is  $\omega^2$  i.e.,  $\omega * \omega^2 = \omega^3 = 1 \in A$   
 $\omega^2$  is  $\omega$  i.e.,  $\omega^2 * \omega = \omega^3 = 1 \in A$

## DEPARTMENT OF MATHEMATICS

v). commutative :

$$1 * w = w \in A$$

$$w * 1 = w \in A$$

Hence  $(A, *)$  is an abelian group.

3]. Let  $I$  be the set of integers. Let  $Z_m$  be the set of equivalence classes generated by the equivalence relation "congruence modulo  $m$ " for any +ve integer  $m$ . Then  $(Z_m, +_m)$  and  $(Z_m, \times_m)$  are monoids.

Soln.

For  $[i], [j] \in Z_m$

a).  $+_m$  is defined as  $[i] +_m [j] = [(i+j) \pmod{m}]$

b).  $\times_m$  is defined as  $[i] \times_m [j] = [(i \times j) \pmod{m}]$

The composition table for  $m=5$  is given as

$(Z_5, +_5)$						$(Z_5, \times_5)$					
$+_5$	0	1	2	3	4	$\times_5$	0	1	2	3	4
0	0	1	2	3	4	0	0	0	0	0	0
1	1	2	3	4	0	1	0	1	2	3	4
2	2	3	4	0	1	2	0	2	4	1	3
3	3	4	0	1	2	3	0	3	1	4	2
4	4	0	1	2	3	4	0	4	3	2	1

i). closure property :

In the above table  $(Z_5, +_5)$  and  $(Z_5, \times_5)$  satisfies closure property.

ii). Associative :

Clearly,  $(Z_5, +_5)$  and  $(Z_5, \times_5)$  satisfies associative property.

iii). Identity elt. :

$[0]$  is the identity elt. w.r. to  $+_m$

$[1]$  is the " " " "  $\times_m$

## DEPARTMENT OF MATHEMATICS

$\therefore (Z_m, +_m)$  and  $(Z_m, \times_m)$  are monoids.

4J. Show that  $(Q^+, *)$  is an abelian group where  $*$  is defined by  $a * b = \frac{ab}{2}, \forall a, b \in Q^+$

Sol.

i). For  $a, b \in Q^+ \Rightarrow a * b = \frac{ab}{2} \in Q^+$   
 $\therefore Q^+$  is closed

ii). For  $a, b, c \in Q^+$ . Then  $a * (b * c) = a * \frac{bc}{2}$   
 $= \frac{a \cdot \frac{bc}{2}}{2} = \frac{abc}{4} \rightarrow (1)$

$(a * b) * c = \frac{ab}{2} * c$   
 $= \frac{\frac{ab}{2} \cdot c}{2} = \frac{abc}{4} \rightarrow (2)$

From (1) and (2),  
 $a * (b * c) = (a * b) * c$

iii). Identity:  
 Let  $a \in Q^+$ . Then  $\exists e \in Q^+$  such that  
 Now  $a * e = a$   
 $\frac{ae}{2} = a \Rightarrow e = 2$

iv). Inverse elt. :  
 Let  $a \in Q^+$ . Then  $\exists a^{-1} \in Q^+$  such that  
 $a * a^{-1} = e$   
 $\frac{a a^{-1}}{2} = 2 \Rightarrow a^{-1} = \frac{4}{a}$

v). Commutative :  
 Let  $a, b \in Q^+$ . Then  $a * b = \frac{ab}{2}$   
 and  $b * a = \frac{ba}{2}$   
 $\therefore a * b = b * a$

Hence  $(Q^+, *)$  is an abelian group.

## DEPARTMENT OF MATHEMATICS

Q7]. Let  $G_1$  denote the set of all matrices of the form  $\begin{bmatrix} x & x \\ x & x \end{bmatrix}$  where  $x \in \mathbb{R}$ . Prove that  $G_1$  is a group under matrix multiplication.

Soln.

i). Closure:

Let  $A, B \in G_1$

$$\text{Let } A = \begin{bmatrix} x & x \\ x & x \end{bmatrix}; B = \begin{bmatrix} y & y \\ y & y \end{bmatrix}$$

$$\begin{aligned} \text{Then } AB &= \begin{bmatrix} x & x \\ x & x \end{bmatrix} \begin{bmatrix} y & y \\ y & y \end{bmatrix} = \begin{bmatrix} xy+xy & xy+xy \\ xy+xy & xy+xy \end{bmatrix} \\ &= \begin{bmatrix} 2xy & 2xy \\ 2xy & 2xy \end{bmatrix} \in G_1 \end{aligned}$$

ii). Associative:

Matrix multiplication is associative.

iii). Identity elt.:

$$\text{Let } A = \begin{bmatrix} x & x \\ x & x \end{bmatrix}. \text{ Then } \exists E = \begin{bmatrix} e & e \\ e & e \end{bmatrix} \Rightarrow AE = A$$

$$\text{Now, } \begin{bmatrix} x & x \\ x & x \end{bmatrix} \begin{bmatrix} e & e \\ e & e \end{bmatrix} = \begin{bmatrix} x & x \\ x & x \end{bmatrix}$$

$$\begin{bmatrix} 2xe & 2xe \\ 2xe & 2xe \end{bmatrix} = \begin{bmatrix} x & x \\ x & x \end{bmatrix}$$

$$2xe = x \Rightarrow e = \frac{1}{2}$$

Hence  $E = \begin{bmatrix} \frac{1}{2} & \frac{1}{2} \\ \frac{1}{2} & \frac{1}{2} \end{bmatrix}$  is the identity elt. of  $G_1$ .

iv). Inverse elt.:

$$\text{Let } A = \begin{bmatrix} x & x \\ x & x \end{bmatrix}. \text{ Then } \exists A^{-1} = \begin{bmatrix} r_0 & r_0 \\ r_0 & r_0 \end{bmatrix} \Rightarrow$$

$$AA^{-1} = E \Rightarrow \begin{bmatrix} x & x \\ x & x \end{bmatrix} \begin{bmatrix} r_0 & r_0 \\ r_0 & r_0 \end{bmatrix} = \begin{bmatrix} \frac{1}{2} & \frac{1}{2} \\ \frac{1}{2} & \frac{1}{2} \end{bmatrix}$$

$$\begin{bmatrix} 2xr_0 & 2xr_0 \\ 2xr_0 & 2xr_0 \end{bmatrix} = \begin{bmatrix} \frac{1}{2} & \frac{1}{2} \\ \frac{1}{2} & \frac{1}{2} \end{bmatrix}$$

$$2xr_0 = \frac{1}{2} \Rightarrow r_0 = \frac{1}{4x}$$

Hence  $A^{-1} = \begin{bmatrix} \frac{1}{4x} & \frac{1}{4x} \\ \frac{1}{4x} & \frac{1}{4x} \end{bmatrix}$  is the inverse of  $A$

Hence  $G_1$  is a group under matrix multiplication.

HW. S.T.  $(\mathbb{R} - \{0\}, *)$  is an abelian group, where  $*$  is defined by  $a * b = a + b + ab, \forall a, b \in \mathbb{R}$
