23MAT101 - MATRICES AND CALCULUS **UNIT-I MATRIX EIGENVALUE PROBLEM**

UNIT-1 - MATRICES Introdution: The term motrix was apparently coined by Sylvester about 1850, but was introduced first by Cayby in 1860. By a matrix we mean an "arrangement " or "rectangular array" of numbers Matrices applications are finding the solution of System of lineur equations, probability, mathematical economics, quaintim mechanics, electrical networks, curve fitting, transportation problems, frameworks in mechanics,

Definition:

A set of 'mn' numbers arranged in a rectangular array having miraus and in columns, the numbers being enclosed by brackets [] or (), is called an montmatrix. post-

Each of the mn' numbers, is called an element of the matrix is usually written as

 $A = \begin{bmatrix} a_{11} & a_{12} & a_{23} & \dots & a_{nn} \\ a_{21} & a_{22} & a_{22} & \dots & a_{2n} \\ a_{31} & a_{32} & a_{33} & \dots & a_{3n} \\ \dots & \dots & \dots & \dots & \dots \\ a_{m_1} & a_{m_2} & a_{m_3} & \dots & a_{mn} \end{bmatrix} \quad \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n} \\ \text{or } A = \begin{bmatrix} a_{1j} \end{bmatrix}_{m \times n}$

DEPARTMENT OF MATHEMATICS

Real Matrix: A matrix is said to be real if all its elements are real numbers. [15 -3 1] is a real matrix. Square matrix: A matrix in which the number of rows is equal to the number of columns is called a square matrix, otherwise, it is said to be a rectangular matrix. Thus, a materix A = [aij] is a square materix if man and a rectiongular matrix if mtn. Q11 912 913 921 922 923 931 932 933 <u> 8 x :</u> The etements, a11, 922, 93 of a square matrix are called its diagonal antipy elements and the diagonal along which these elements lie is called the principal diagonal. The sum of the diagonal elements of a square metrix is called its trace. Row matrix " A matrix having only one row and any number of columns. (ie Ixn matrix). SE [2 5 -3 0] Column materix: A matrix having only one column and any number of nows. [ii) mx1 matrix] 12 exi

DEPARTMENT OF MATHEMATICS

| Unit Matrix or Identity Matrix Matrix |
|--|
| A square matrix is which each |
| diagonal element is unity (iP) 1) is called a |
| unit matrix or identity metrix. |
| $I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \\ 0 & 0 \end{bmatrix}_{3\times 3}$ |
| |
| Upper Triangular Matrix: |
| A square matrix in which all the |
| elemente below the principal diagonal are zero |
| is called an uppor triangular matrix. |
| ex: A for without two is builded in attack |
| 0 -1 5 |
| $\begin{bmatrix} 2 & 3 & 4 \\ -1 & 5 \\ 0 & 0 & 3 \end{bmatrix}$ where $d = 2 = 2 \begin{bmatrix} 2 & 5 \\ 4 & 1 \end{bmatrix} = 2$ |
| Lower Triangular Matrix: |
| A square man in and |
| elements above the principal diagonal are zero |
| is called as lower triangular matrix |
| Lower Triangular Matrix: A square matrix is which all the elements above the principal diagonal are zero is called as lower triangular matrix. $\sum_{i=1}^{n} \begin{bmatrix} -1 & 0 & 0 \\ 5 & 6 & 0 \\ 3 & 2 & 1 \end{bmatrix}$ |
| 5 6 0 |
| |
| Viangular |
| A square matrix in which all the |
| at either below or above the principal |
| trangular matrix. |
| Thus, a triangular matter is server upper |
| triangular or lower triangular. |
| the second se |

TAMIL NADU **DEPARTMENT OF MATHEMATICS** Equal Matrices matrices A and B are said to be equal if and only if they have some order and their corresponding etements are equal . Addition and Subtraction of Matrices $A = \begin{bmatrix} 2 & 5 & -1 \\ 3 & 0 & 4 \end{bmatrix}$ and $B = \begin{bmatrix} 1 & -6 & 2 \\ -2 & 5 & 7 \end{bmatrix}$ A+B = $\begin{bmatrix} 3 & -1 & 1 \\ 1 & 5 & 11 \end{bmatrix}$, A-B= $\begin{bmatrix} 1 & 11 & -3 \\ 5 & -5 & -3 \end{bmatrix}$. <u>Matrix Multiplication</u> Two matrices A and B core said to be Conformal for multiplication if the number of columns of A is equal to the number of rows of B. Scalar Multiplication $A = \begin{bmatrix} a_1 & a_2 & a_3 \\ b_1 & b_2 & b_3 \end{bmatrix} \Rightarrow KA = \begin{bmatrix} Ka_1 & Ka_2 & Ka_3 \\ Kb_1 & Kb_2 & Kb_3 \end{bmatrix}$ Transpose of a Matrix and the second The matrix obtained from A by Changing its rows into columns and columns into rows is called the transpose of A and is denoted by A' or AT. the few states and the set of $A = \begin{bmatrix} 1 & 0 & 2 & 5 \\ 2 & -1 & 3 & 7 \end{bmatrix} \Rightarrow A^{7} = \begin{bmatrix} 1 & 2 \\ 0 & -1 \\ 2 & 3 \\ 5 & 7 \end{bmatrix}$ Symmetric Mabier A square matrix A=[aij] is said to be Symmetric if A'= A.
