

Biological Control

Across

- [2] important component of lipid
- [4] requires single host to complete its life cycle
- [7] defense mechanisms of plants
- [8] any organism that benefits the growing process
- [10] feeding on insects
- [11] an essential macronutrient
- [15] a genus of minute polyphagous wasps that are endoparasitoids of insect eggs
- [16] control using living organism to suppress pest population

- [17] taking of food
- [18] simple sugar
- [19] consumption of host tissue by the adult female parasitoid

Down

[1] substance used for destroying insects or other organisms harmful to cultivated plants or to animals.

[3] serves chiefly to attract pollinators

[4] feeding on plants

[5] regulatory mechanism in export and import

[6] keeping out

[9] feeding where the host may survive or or die

[12] insects that is usually larger than its prey

[13] assimilation by living organisms of food materials

enabling them to grow and reproduce

[14] proper biological use of food
