I YEAR ISEM

UNIT 2 – BUILDING COMPONENTS

Topic 8 : Plastering And Types

Plastering And Types /19 GET102-Basic Civil And Mechanical Engineering /Dr.O.R.Kavitha/Civil/SNSCT

A fine paste of mortar made by mixing cement with sand or fat lime with sand or surkhi in addition to sufficient quantity of water if called plaster

The art of covering the surface of masonry work with a suitable material is called plastering

Plastering Types

Cement Plastering Lime Plastering Mud Plastering Stucco Plastering Moughal Plastering

Cement Plastering

The mix ratio of mortar in case of cement plastering depends upon the nature of the work to be plastered

✤For rich plastering work at sensitive places (e.g. in side bathrooms, W.C. etc.), 1:3 cement plaster mix is used. For general plastering of walls 1:5 to 1:8 cement plaster mixes are used

Cement Plastering

✤For rich plastering work at sensitive places (e.g. in side bathrooms, W.C. etc.), 1:3 cement plaster mix is used. For general plastering of walls 1:5 to 1:8 cement plaster mixes are used

Lime Plastering

The proportioning of the ingredients of a lime plaster is adopted according to the number of coats to be applied

One coat, 1 part of lime to 1.5 parts of sand is used

If two coats are to be applied, the proportion for the first coat is same as above while the second coat consists of two parts of lime and one part of sand

QUESTION TIME

In our class –Cement or Lime Plastering which one is used...??

Plastering And Types /19 GET102-Basic Civil And Mechanical Engineering /Dr.O.R.Kavitha/Civil/SNSCT

Mud Plastering

The wall surface is first prepared as described in case of cement plastering

The mud plaster is then evenly dashed against the wall surface with a wooden float.

After 24 hours, the surface is tamped

The function of tamping is to compact the layer and to drive it deep into the joints

It also helps to avoid developments of cracks due to hollows.

Stucco Plastering

This is special type of plaster Decorative type of plaster which provides an excellent finish like that with marble lining

After preparing the surface, stucco plastering is applied in three coats

Each coat should be permitted to dry thoroughly before applying the next coat

Moughal Plastering

Applied in two coats of lime mortar by mixing lime, sand and surkhi in the ratio of 4:3:1 along with glue and powdered gull nut

The surface is well wetted and the second coat of about 1.25 mm thickness is applied when the first coat is hardened

The finished plastered surface is kept wet for 3 weeks

QUESTION TIME ... How can this be?

Plastering And Types /19 GET102-Basic Civil And Mechanical Engineering /Dr.O.R.Kavitha/Civil/SNSCT

To solve this, you'll need to imagine the number 29 in Roman digits. That way, it'll look like this: XXIX. Now you simply remove I and get XXX, which, in the Arabic system, means 30.
