

SNS COLLEGE OF TECHNOLOGY An Autonomous Institution Coimbatore-35

Accredited by NBA – AICTE and Accredited by NAAC – UGC with 'A+' Grade Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai

DEPARTMENT OF ELECTRONICS & COMMUNICATION ENGINEERING 19ECB212 – DIGITAL SIGNAL PROCESSING

II YEAR/ IV SEMESTER

UNIT 1 – DISCRETE FOURIER TRANSFORM

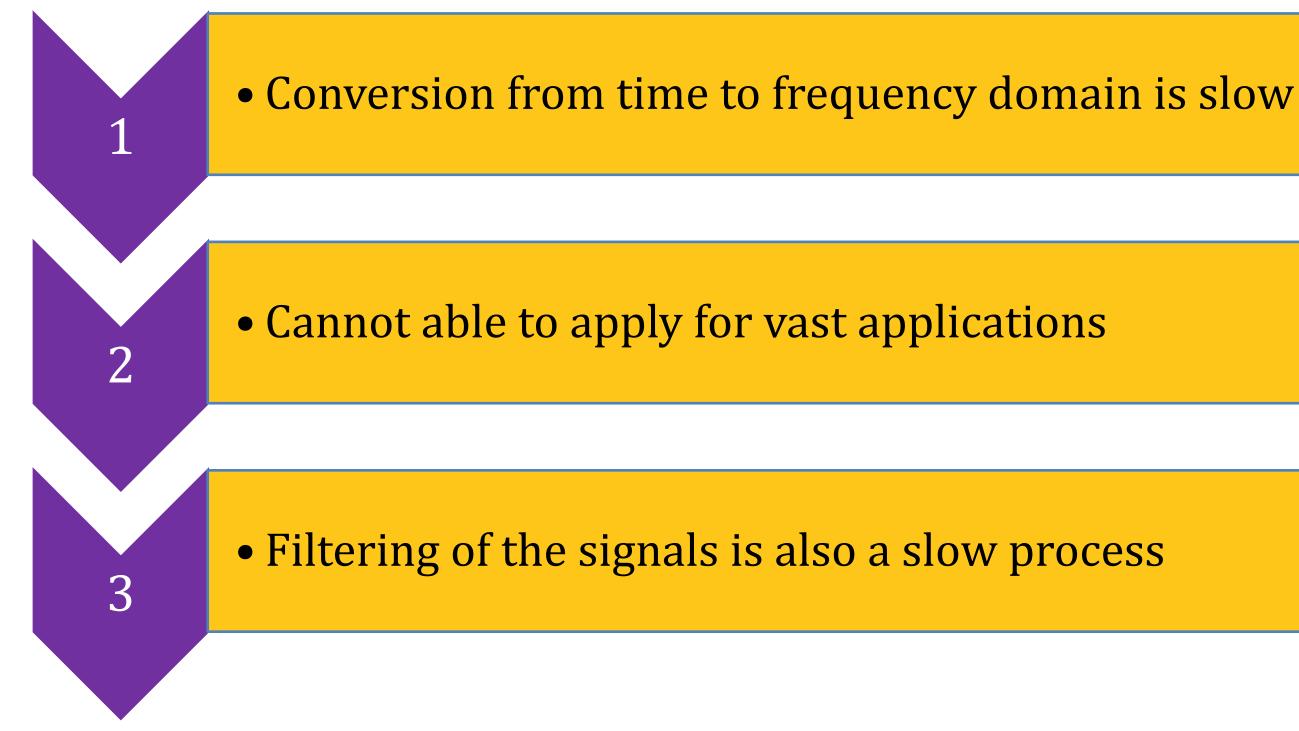

TOPIC – FAST FOURIER TRANSFORM - DIT

Decimation in Time FFT/19ECB212 – DIGITAL SIGNAL PROCESSING/J.PRABAKARAN/ECE/SNSCT

METHOD

DFT

FFT

Decimation in Time FFT/19ECB212 – DIGITAL SIGNAL PROCESSING/J.PRABAKARAN/ECE/SNSCT

FAST FOURIER TRANSFORM

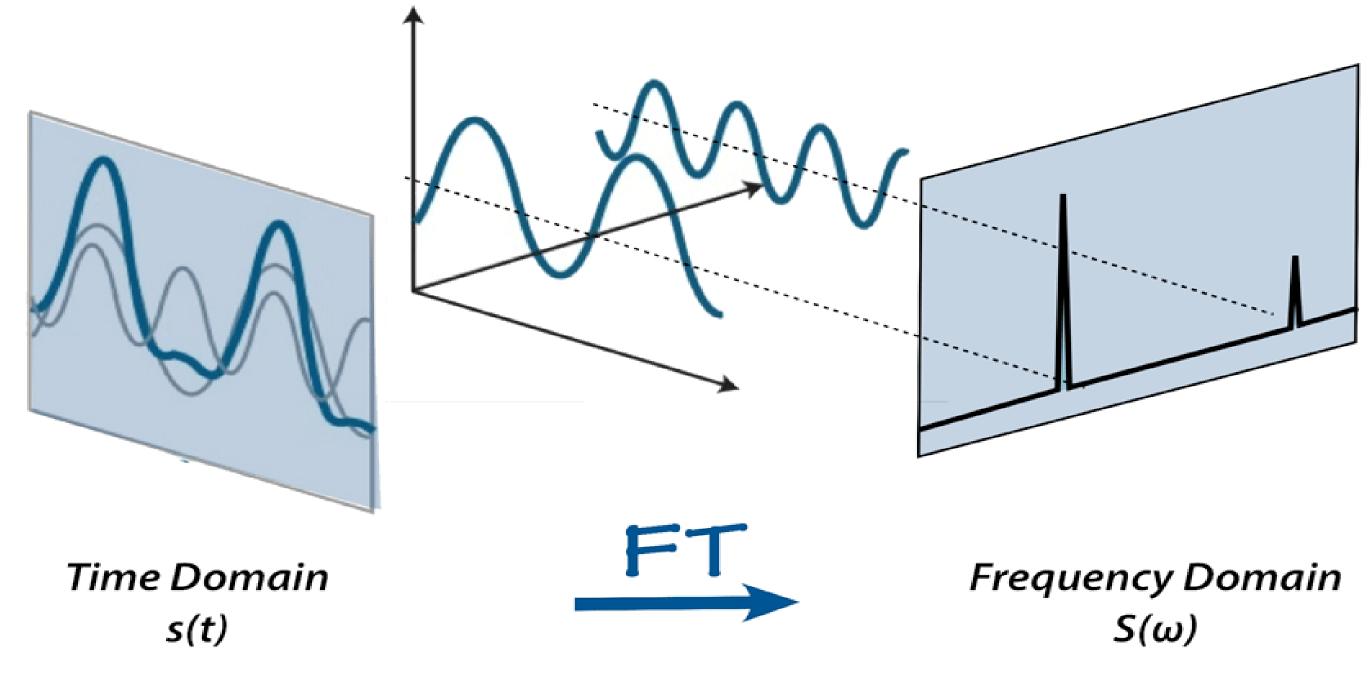

- The Fast Fourier Transform (FFT) is a family of algorithms that \bullet calculates efficiently the Discrete Fourier Transform (DFT)
- The DFT is also a sequence, X[k] ullet
- This efficiency of the FFT is at a maximum when the length of the ulletsequence is a power of 2, i.e., $N=2^{p}$, with p is a positive integer
- The complexity of FFT algorithms is $O(Nlog_2N)$. ullet

FAST FOURIER TRANSFORM

DECIMATION IN TIME FFT

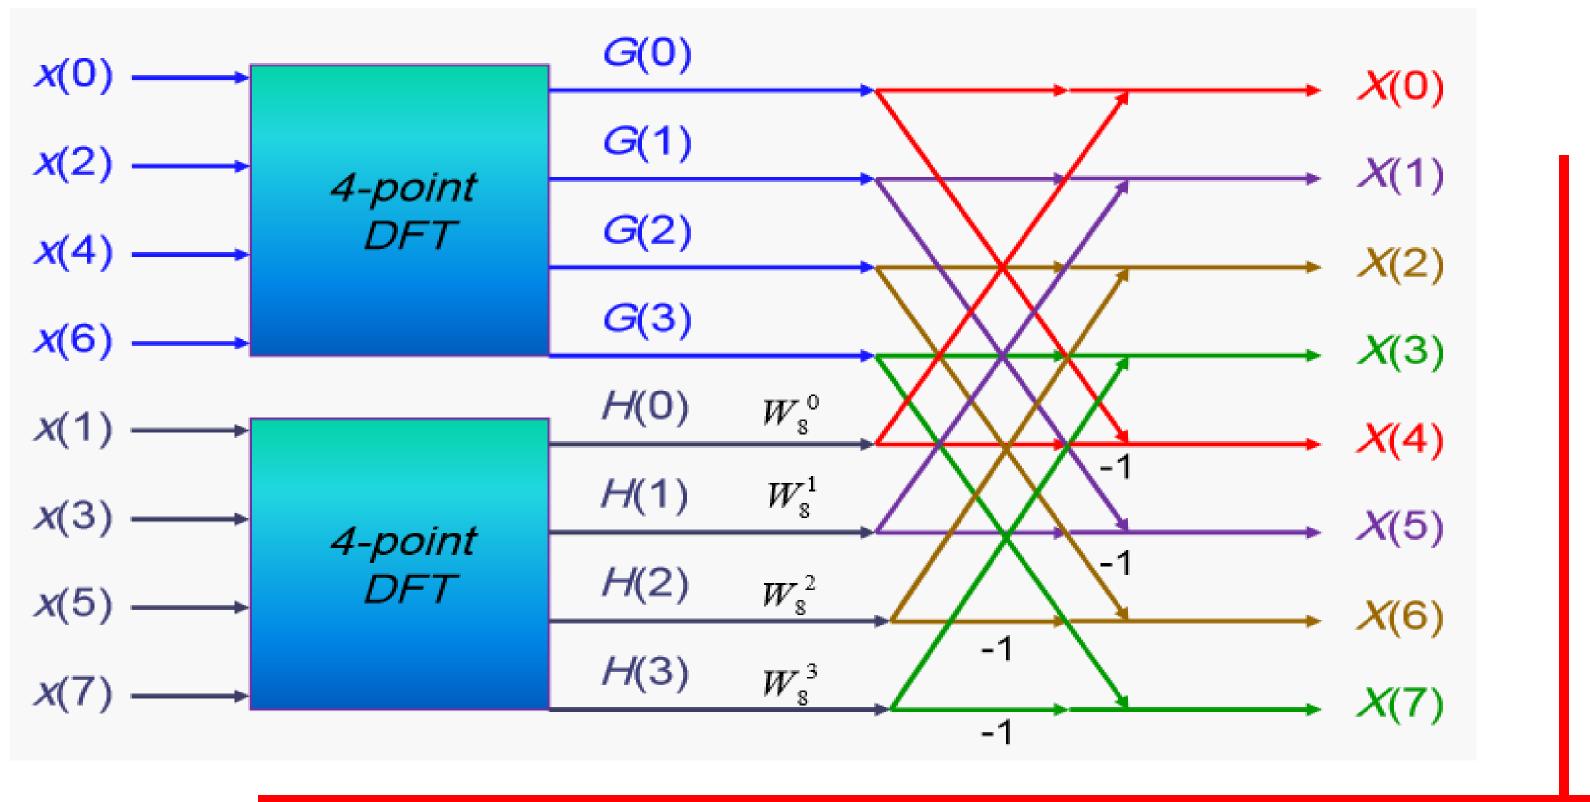

Decimation in Time FFT/19ECB212 – DIGITAL SIGNAL PROCESSING/J.PRABAKARAN/ECE/SNSCT

INPUT SEQUENCE ORDER

Original	Binary Form	Reversed Form	Final
0	000	000	0
1	001	100	4
2	010	010	2
3	011	110	6
4	100	001	1
5	101	101	5
6	110	011	3
7	111	111	7

COMPLEX MULTIPLICATIONS

- Each inner product requires N complex multiplications
- There are N inner products
- Hence we require N² multiplications
- However, the first row and first column are all 1s, and should not be counted as multiplications
- *There are 2N –1 such instances*
- Hence, the number of complex multiplications is N^2-2N+1 , i.e., $(N-1)^2$

COMPLEX & DDITIONS

- Each inner product requires N –1 complex additions
- There are N inner products
- *Hence we require N(N 1) complex additions*
- No. of complex multiplications: $(N-1)^2$
- No. of complex additions: N(N -1)

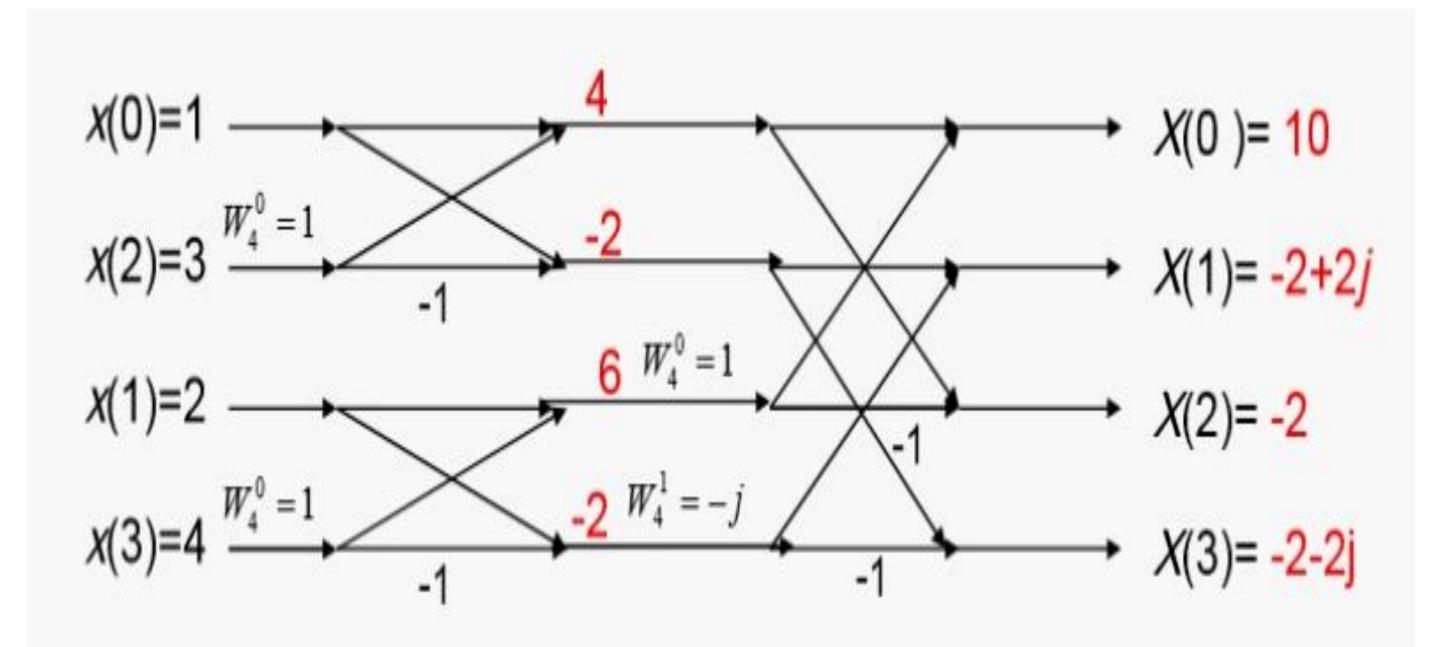

DECIMATION IN TIME

Given x(n)={1,2,3,4}, find X[k] using 4 Point DIT FFT algorithm

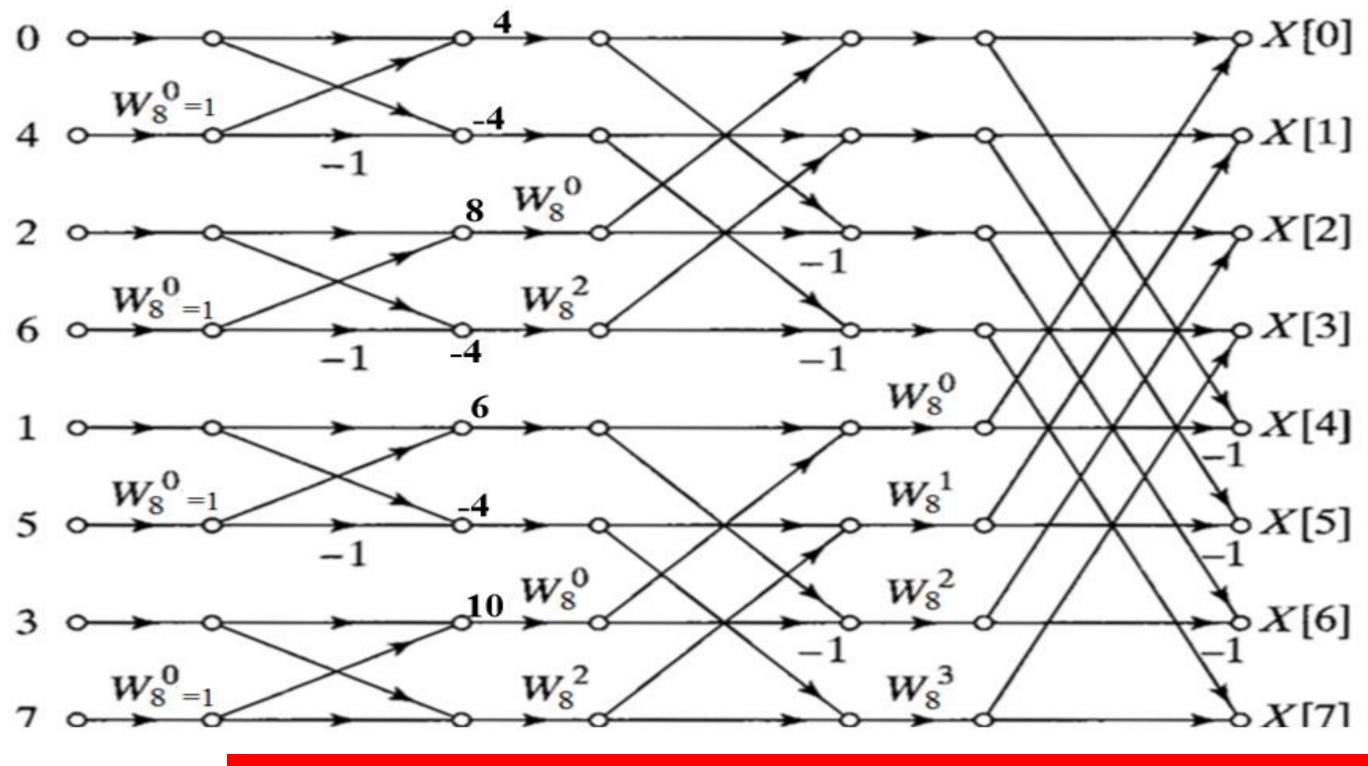

Decimation in Time FFT/19ECB212 – DIGITAL SIGNAL PROCESSING/J.PRABAKARAN/ECE/SNSCT

DECIMATION IN TIME – STAGE 1

Given x(*n*)={0,1,2,3,4,5,6,7}, *find X*[*k*] *using DIT FFT algorithm*

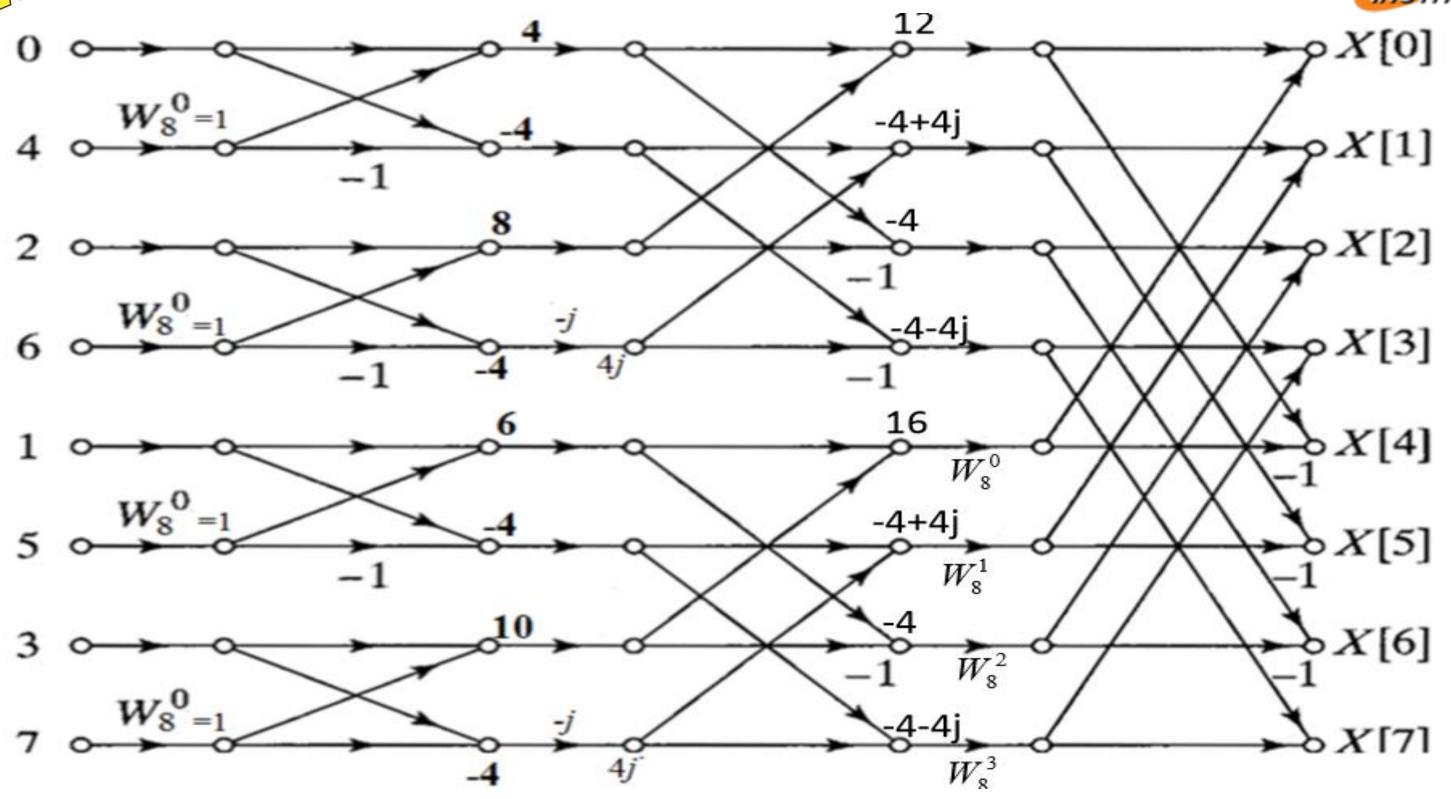

Decimation in Time FFT/19ECB212 – DIGITAL SIGNAL PROCESSING/J.PRABAKARAN/ECE/SNSCT

20-Jan-25

DECIMATION IN TIME – STAGE 2

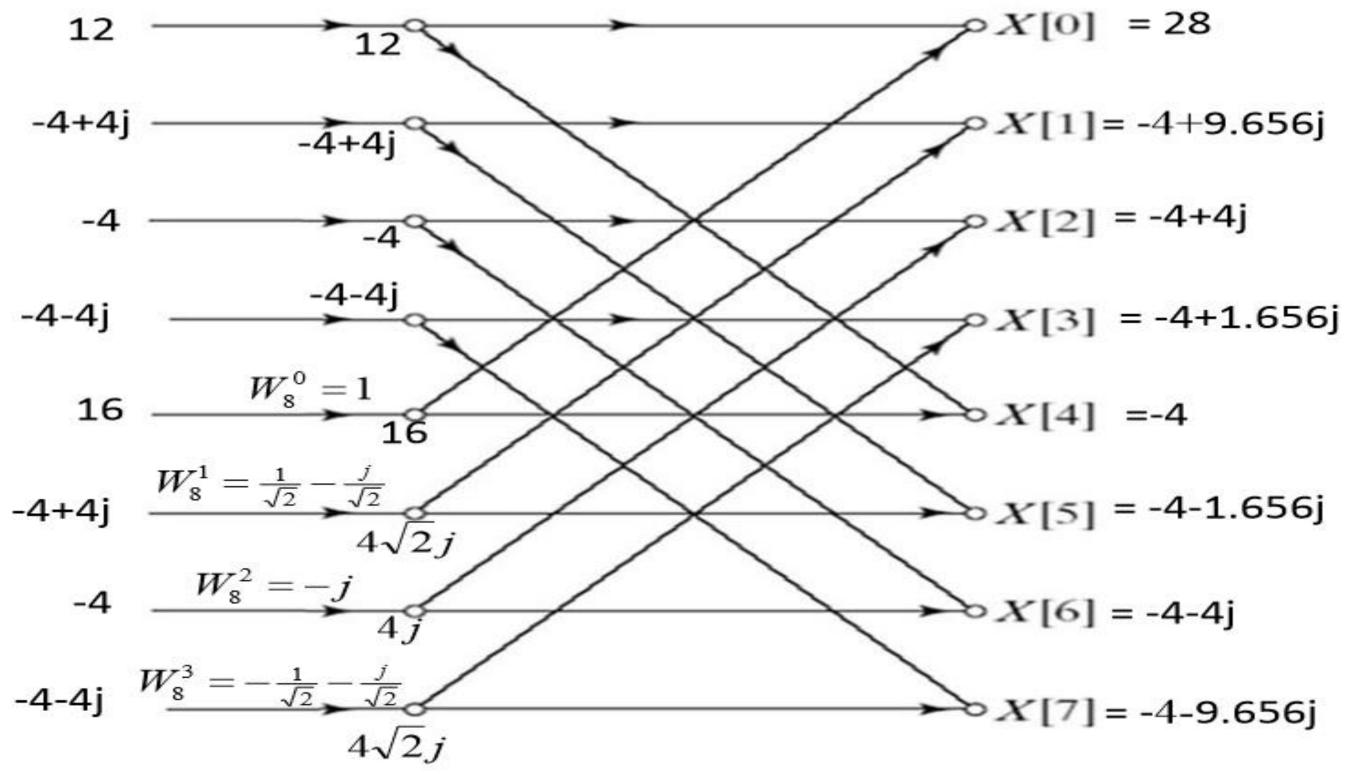

Decimation in Time FFT/19ECB212 – DIGITAL SIGNAL PROCESSING/J.PRABAKARAN/ECE/SNSCT

DECIMATION IN TIME – STAGE 3

Decimation in Time FFT/19ECB212 – DIGITAL SIGNAL PROCESSING/J.PRABAKARAN/ECE/SNSCT

DIFFERENCE B/W DIRECT COMPUTATION & **RADIX-2 FFT**

S.No.	Direct Computation	
1	Direct computation requires large number of computations as compared with FFT algorithms.	Radix-2 FF number of o
2	Processing time is more and more for large number of N hence processor remains busy.	•
3	Direct computation does not requires splitting operation.	Splitting o domain bas basis (DIF)
4	As the value of N in DFT increases, the efficiency of direct computation decreases.	As the value officiency of the second

Decimation in Time FFT/19ECB212 – DIGITAL SIGNAL PROCESSING/J.PRABAKARAN/ECE/SNSCT

Radix 2 FFT

FT algorithms requires less computations.

time is less hence these compute DFT very quickly as with direct computation.

operation is done on time sis (DIT) or frequency domain

ue of N in DFT increases, the of FFT algorithms increases.

ASSESSMENT

- What is meant by FFT and list the methods of FFT. 1.
- In Fast Fourier Transform, ----- domain can be converted into ----- domain. 2.
- 3. In Decimation in Time, the flow graph is represented as ----, 4 – Point and ----FFT.
- What is the difference between direct computation and Radix 2 FFT. 4.
- Determine DIT of $x(n) = \{1, 2, 3, 4\}$ 5.
- In Fast Fourier Transform, 6.
- No. of complex multiplications: ------ No. of complex additions: --

THANK YOU
