DEPARTMENT OF MATHEMATICS

GIREEN'S THEOREM IN A PLANE

If R is a closed region of the XY Plane bounded by a simple closed curve C and if M and N are continuous functions of x and y having continuous derivatives in R then

$$\int_{C} M dx + N dy = \iint_{R} \left(\frac{\partial N}{\partial x} - \frac{\partial M}{\partial y} \right) dx dy$$

Where c is a curve traversed in the anticlockwise direction.

PROBLEMS

Evaluate by Gireen's theorem $\int (xy + x^2) dx + (x+y)$

Where c is the square formed by x = -1, x = 1, y = -1, y =

Solution :

(An Autonomous Institution)

Let R be the region enclosed by C:

By Green's theorem,
$$\int M dx + N dy = \iint \left(\frac{\partial N}{\partial x} - \frac{\partial M}{\partial y} \right) dx dy$$
Here $M = xy + x^2 \Rightarrow \frac{\partial M}{\partial y} = x$

$$N = x^2 + y^2 \Rightarrow \frac{\partial N}{\partial x} = 2x$$

$$\int (xy + x^2) dx + (x^2 + y^2) dy = \iint (2x - x) dx dy.$$

$$= \iint x dx dy$$

$$= \iint x dx dy$$

$$= \iint x dx dy$$
where C is the rectangle with vertices $(0,0)$, $(\pi,0)$, $(\pi,\pi/a)$, $(0,\pi/a)$.
Soln:
Let R be the region enclosed by C.

By Green's theorem,
$$\int M dx + N dy = \iint \left(\frac{\partial N}{\partial x} - \frac{\partial M}{\partial y} \right) dx dy$$
Here $M = e^{-x} Siny \Rightarrow \frac{\partial M}{\partial x} = e^{-x} cosy$

$$N = e^{-x} cosy \Rightarrow \frac{\partial N}{\partial x} = -e^{-x} cosy$$

$$\int e^{-x} (Siny dx + cosy dy) = \iint (-e^{-x} cosy - e^{-x} cosy) dx dy$$

Detailment of mathematics

$$= \int_{0}^{\pi/2} \int_{0}^{\pi} (-2e^{-x} \cos y) dx dy$$

$$= -2 \int_{0}^{\pi/2} \int_{0}^{\pi} e^{-x} \cos y dx dy$$

$$= 2 (e^{-1}).$$
(3) Evaluate by Gireen's theorem
$$\int_{0}^{\pi/2} (x^{2} - \cosh y) dx + (y + \sin x) dx \text{ where } c \text{ is the operation}$$

$$\int_{0}^{\pi/2} (x^{2} - \cosh y) dx + (y + \sin x) dx \text{ where } c \text{ is the open}$$

$$\int_{0}^{\pi/2} (\cosh x - 1).$$
(4) Venify Gireen's theorem in the plane for
$$\int_{0}^{\pi/2} (3x^{2} - 8y^{2}) dx + (4y - 6xy) dy \text{ where } c \text{ is the open}$$

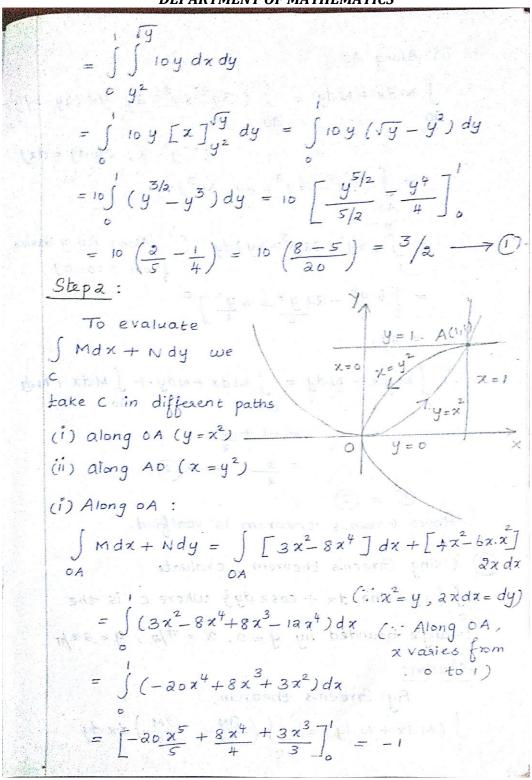

$$\int_{0}^{\pi/2} \int_{0}^{\pi/2} \int_{0}^{\pi/2$$
