**UNIT-I Vector calculus** 

Divergence and curl of vector field

Divergence of a vector point function

tet F' be any given continuously differentiable point function then the divergence of

 $\vec{F}$ 'u defined as  $\vec{F} = \nabla \cdot \vec{F} = \vec{1} \cdot \frac{\partial F_1}{\partial x} + \vec{j} \cdot \frac{\partial F_2}{\partial y} + \vec{k} \cdot \frac{\partial F_3}{\partial z}$ s = "stopies suppose and resorted all in all palle

det a vector F' is said to be solenoidales 

tunt of a vector point spunction point spunct continuosing differentiable vector point function then in the the un or notation of the six defined by

$$\vec{F} = \nabla \times \vec{F} = \begin{bmatrix} \vec{7} & \vec{7} & \vec{F} \\ \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ \vec{F}_1 & \vec{F}_2 & \vec{F}_3 \end{bmatrix}$$

Irriotational vector

A vector F is said to be butorational if
