Coimbatore-35
An Autonomous Institution

Accredited by NBA – AICTE and Accredited by NAAC – UGC with 'A+' Grade
Approved by AICTE, New Delhi & Affiliated to Anna University, Chennai

DEPARTMENT OF ARTIFICIAL INTELLIGENCE & MACHINE LEARNING

23ITT101-PROGRAMMING IN C AND DATA STRUCTURES

I YEAR - II SEM

UNIT 1 – INTRODUCTION TO C

TOPIC 5 – Structure of a 'C' program

STRUCTURE OF C PROGRAM

Documentation Section

Link Section

Definition Section

Global Declaration Section

main() Function Section

{

Declaration Part
Executable Part

}

Subprogram Section

Function 1
Function 2
-
Function N

STRUCTURE OF C PROGRAM

- C program can be viewed as a group of building blocks called functions.
 - A function is a subroutine that may include one or more statements designed to perform a specific task.
- Documentation Section
 - The documentation section consists of a set of **comment lines** giving the name of the program, the author and other details, which the programmer would like to use later.
- Link Section
 - The link section provides instructions to the **compiler to link functions** from the system **library**.
- Definition Section
 - The definition section defines all symbolic constants.

STRUCTURE OF C PROGRAM

➤ Global Declaration Section

- There are some variables that are used in **more than one function**.
- Such variables are called global variables and are declared in the global declaration section that is **outside of all the functions**.
- This section also declares all the user-defined functions

➤ Main() Function Section

- Every C program **must have one main() function** section.
- This section contains two parts:
 - ❖ Declaration part
 - » declares all **the variables** used in the executable part
 - ❖ Executable part.
 - » There should be at least **one statement** in the executable part.
- These two parts must appear between the **opening and the closing braces**.
- The program execution begins at the opening brace and ends at the closing brace.

STRUCTURE OF C PROGRAM

- The closing brace of the main function section is the logical end of the program.
- All statements in the declaration and executable parts **end with a semicolon(;).**
- Subprogram Section
 - The subprogram section contains all the user-defined functions that **are called in the main function.**
 - User-defined functions are generally placed **immediately after the main function,** although they may appear in any order.
- All sections, except the main function section may be absent when they are not required

STRUCTURE OF C PROGRAM

BASIC STRUCTURE OF A 'C' PROGRAM:

Documentation section [Used for Comments]
Link section
Definition section
Global declaration section [Variable used in more than one function]
main() { Declaration part Executable part }
Subprogram section [User-defined Function] Function1 Function 2 : : Function n

Example:

→ `//Sample Prog`

→ `#include<stdio.h>`
`#include<conio.h>`

→ `void fun();`

→ `int a=10;`

→ `void main()`
`{`
`clrscr();`
`printf("a value inside main(): %d",a);`
`fun();`
`}`

→ `void fun()`
`{`
`printf("\na value inside fun(): %d",a);`
`}`

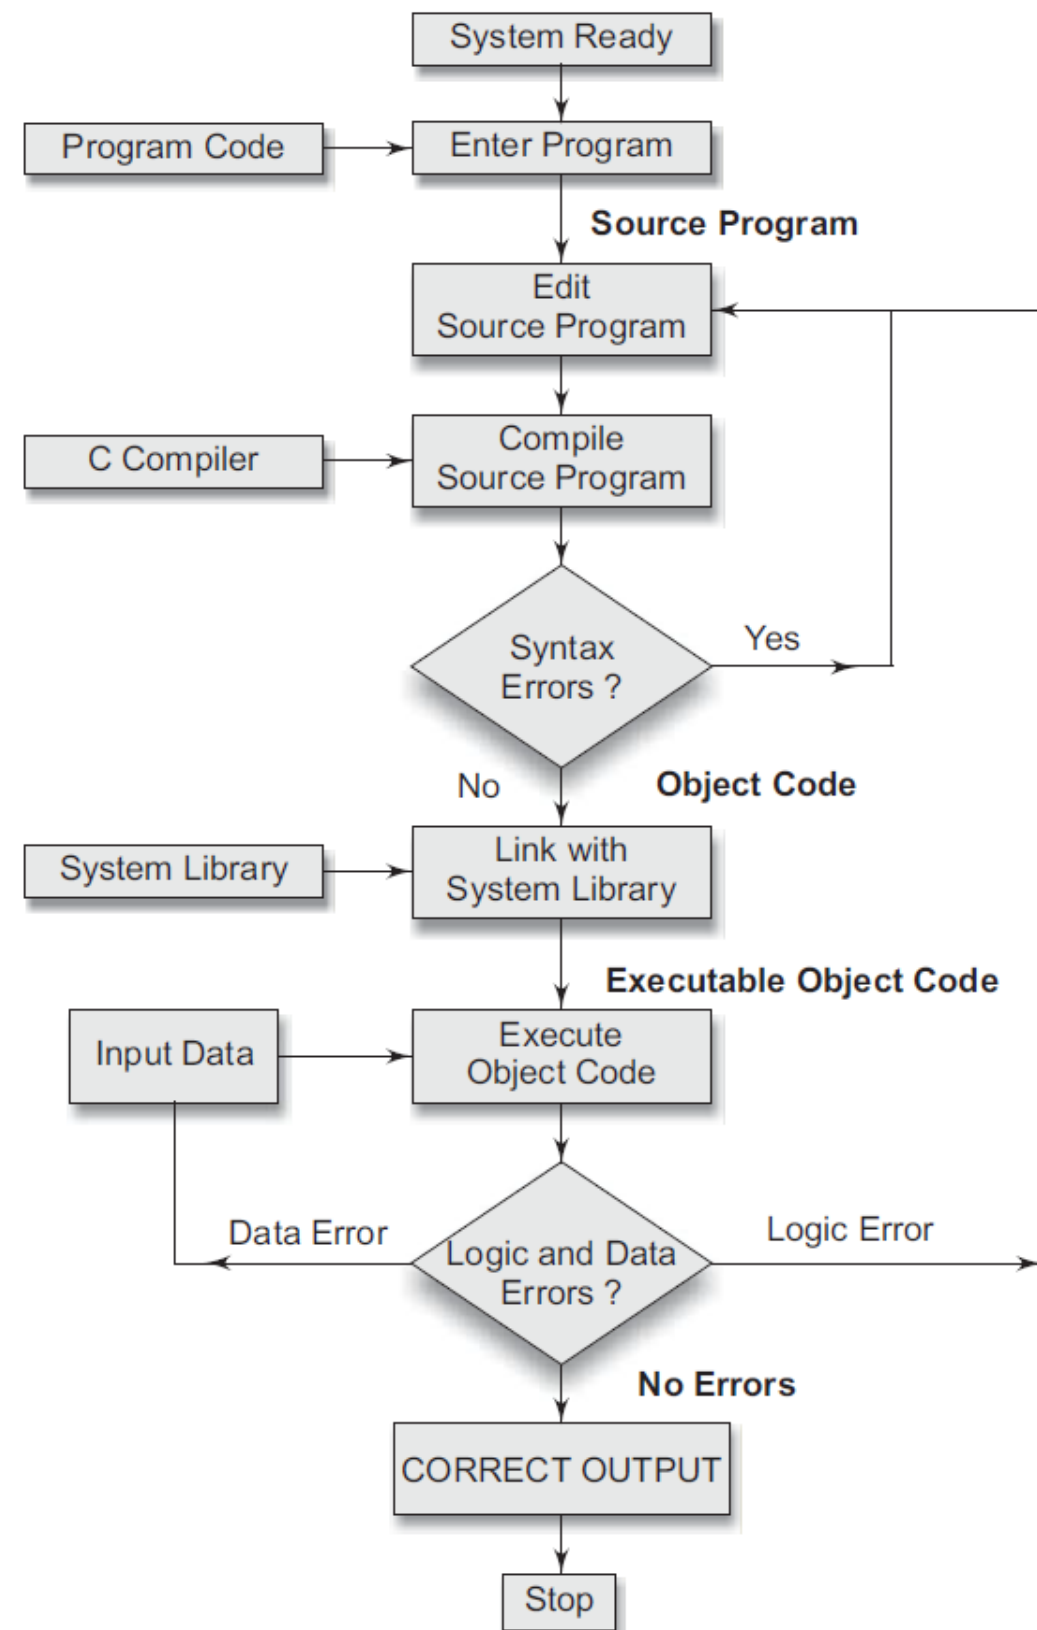

EXECUTING A 'C' PROGRAM

➤ Executing a program written in C involves a series of steps.

These are:

1. **Creating** the program;
2. **Compiling** the program;
3. **Linking** the program with functions that are needed from the C library; and
4. **Executing** the program.

EXECUTING A 'C' PROGRAM

1. Creating the Program

- The program must be **entered into a file.**
- **The file name can consist of letters, digits and special characters, followed by a dot and a letter c.**
- Examples of valid file names are:
 - ❖ hello.c
 - ❖ program.c
 - ❖ ebg1.c
- The file is created with the help of a text editor (ex. notepad) and some **standard C editors.**
- The **program that is entered into the file is known as the source program**, since it represents the original form of the program

EXECUTING A 'C' PROGRAM

2. Compiling

- Let us assume that the source program has been created in a file named ebg1.c.
- Now the program is ready for compilation.
- The source program instructions are **now translated into a form that is suitable** for execution by the computer.
- The translation is done after examining each instruction for its correctness.
- If everything is alright, the compilation proceeds silently and the translated program is stored on another file with the name **ebg1.o**.
- This program is known as **object code**.

EXECUTING A 'C' PROGRAM

3. Linking

- Linking is the process of putting together other program files and functions that are required by the program.
 - For example, if the program is using `exp()` function, then the object code of this function should be brought from the **math library** of the system and linked to the main program.
 - The linking is **automatically done** (if no errors are detected) in most of the Standard C Editors.
-
- If any mistakes in the **syntax and semantics** of the language are discovered, they are listed out and the compilation process ends right there.
 - The errors should be corrected in the source program with the help of the editor and the compilation is done again.
 - The compiled and linked program is called the executable object code and is stored automatically in another file named **a.out**.
 - Note: Different systems use different compilation commands for linking various functions.

EXECUTING A 'C' PROGRAM

4.Executing the Program

- Execution is a simple task
- **load the executable object code** into the computer memory and execute the instructions
- During execution, the program may **request for some data to be entered** through the keyboard.
- Sometimes the program does not produce the desired results.
- Perhaps, something is wrong with the program logic or data.
- Then it would be necessary to correct the source program or the data.
- In case the source program is modified, the **entire process** of compiling, linking and executing the program should be repeated.
- Note that the linker always assigns the same name a.out.
- When we compile another program, this file will be overwritten by the executable object code of the new program.

*Thank
you!*
