UNIT-IV CORRELATION AND SPECTRAL DENSITIES

Cross correlation :

A cross correlation of two random processes $x(t)$ & $y(t)$ is defined by,

$$R_{xy}(\tau) = E[x(t) \cdot y(t+\tau)]$$

$$R_{yx}(\tau) = E[y(t) \cdot x(t+\tau)]$$

1. If $x(t)$ and $y(t)$ are wss process, then

$$R_{xy}(-\tau) = R_{yx}(\tau)$$

Proof :

WKT $R_{xy}(\tau) = E[x(t) \cdot y(t+\tau)]$

Now, $R_{xy}(-\tau) = E[x(t) \cdot y(t-\tau)]$

Take $t-\tau = t_1 \Rightarrow t = t_1 + \tau$

$$\begin{aligned} R_{xy}(-\tau) &= E[x(t_1 + \tau) \cdot y(t_1)] \\ &= E[y(t_1) \cdot x(t_1 + \tau)] \end{aligned}$$

$$R_{xy}(-\tau) = R_{yx}(\tau)$$

2. If $x(t)$ and $y(t)$ are wss process, then

$$R_{xy}(\tau) \leq \sqrt{R_{xx}(0) R_{yy}(0)}$$

Proof :

By cross correlation,

$$R_{xy}(\tau) = E[x(t) \cdot y(t+\tau)]$$

By Schwartz inequality property,

$$[E(xy)]^2 \leq E(x^2) \cdot E(y^2)$$

Let $x = x(t)$, $y = y(t+\tau)$

$$E[x(t) \cdot y(t+\tau)]^2 \leq E[x^2(t)] \cdot E[y^2(t+\tau)]$$

$$[R_{xy}(\tau)]^2 \leq E[x^2(t)] E[y^2(t+\tau)]$$

$$\therefore E[y^2(t+\tau)] = E[y^2(t)]$$

UNIT-IV CORRELATION AND SPECTRAL DENSITIES

$$[R_{xy}(\tau)]^2 \leq E[x^2(t)] \cdot E[y^2(t)]$$

$$\text{By Prop. (1), } \Rightarrow E[x^2(t)] = R_{xx}(0)$$

$$E[y^2(t)] = R_{yy}(0)$$

$$\therefore [R_{xy}(\tau)]^2 \leq R_{xx}(0) \cdot R_{yy}(0)$$

$$R_{xy}(\tau) \leq \sqrt{R_{xx}(0) \cdot R_{yy}(0)}$$

Q. Consider two R.P. $x(t) = \sqrt{2} \cos(\omega t + \theta)$ and $y(t) = \sqrt{2} \cos(\omega t + \phi)$, where $\phi = \theta - \frac{\pi}{2}$ and θ is uniformly distributed random variable over $[0, 2\pi]$.

$$\text{Verify that } |R_{xy}(\tau)| \leq \sqrt{R_{xx}(0) \cdot R_{yy}(0)}$$

Soln.

UNIT-IV CORRELATION AND SPECTRAL DENSITIES

$$\begin{aligned} Y(t) &= \alpha \cos(\omega t + \phi) \\ &= \alpha \cos(\omega t + \theta - \pi/2) \\ &= \alpha \cos\left[\frac{\pi}{2} - (\omega t + \theta)\right] \end{aligned}$$

$$Y(t) = \alpha \sin(\omega t + \theta)$$

$$\begin{aligned} R_{yy}(t, t+\tau) &= E[Y(t) Y(t+\tau)] \\ &= \alpha E[\alpha \sin(\omega t + \theta) \sin(\omega t + \omega\tau + \theta)] \\ &= \alpha [E[\cos \omega\tau] - E[\cos(2\omega t + \omega\tau + 2\theta)]] \\ &= \alpha \cos \omega\tau - \alpha \quad \therefore E[\cos(2\omega t + \omega\tau + 2\theta)] \\ &= 0 \end{aligned}$$

$$R_{yy}(\tau) = \alpha \cos \omega\tau \quad = 0$$

$$\begin{aligned} R_{xy}(t, t+\tau) &= E[x(t) \cdot y(t+\tau)] \\ &= E[3 \cos(\omega t + \theta) \sin(\omega t + \omega\tau + \theta)] \\ &= 3 E[\cos(\omega t + \theta) \sin(\omega t + \omega\tau + \theta)] \\ &= 3 E[\sin(\omega t + \omega\tau + 2\theta) + \sin \omega\tau] \\ &= 3 \{ E[\sin(\omega t + \omega\tau + 2\theta)] + E[\sin \omega\tau] \} \end{aligned}$$

$$R_{xy}(\tau) = 3 \sin \omega\tau$$

$$|R_{xy}(\tau)| = |3 \sin \omega\tau| \leq 3 \quad \therefore |\sin \omega\tau| \leq 1$$

$$\text{and } R_{xx}(0) \cdot R_{yy}(0) = \frac{9}{2} \cdot 0 = 9$$

$$\sqrt{R_{xx}(0) \cdot R_{yy}(0)} = 3$$

$$\therefore |R_{xy}(\tau)| \leq \sqrt{R_{xx}(0) \cdot R_{yy}(0)}$$

Let $x(t)$ & $y(t)$ be defined by $x(t) = A \cos \omega t + B \sin \omega t$ and $y(t) = B \cos \omega t - A \sin \omega t$ where ω is a constant and A, B are independent r.v.s. both having zero mean & variance σ^2 . Find the cross correlation of $x(t)$ & $y(t)$. Are $x(t)$ & $y(t)$ jointly wss process?
